For inquiries, call or text us at (765) 729-5845.

It is hard to believe that 90% of your baby's brain will be developed by the time he/she is 5 years old. The parent is the child's first teacher and if you use these simple everyday activities provided in the kits it will help build skills necessary for kindergarten. Parents play a critical role in their child's development.

Spending time together – playing, singing, reading, and even just talking – can make a big difference!
